

FOR RELEASE AT 8:30 AM EDT, THURSDAY, JULY 16, 2026

ADVANCE MONTHLY SALES FOR RETAIL AND FOOD SERVICES, JUNE 2026

Release Number: CB26-113

July 16, 2026 — The U.S. Census Bureau announced the following advance estimates of U.S. retail and food services sales for June 2026:

ADVANCE MONTHLY SALES		
June 2026	\$768.6 billion	0.2%*
May 2026 (revised)	\$766.9 billion	1.0%
Next release: August 14, 2026		
* The 90 percent confidence interval includes zero. There is insufficient statistical evidence to conclude that the actual change is different from zero. Data adjusted for seasonal variation and holiday and trading-day differences but not for price changes. Source: U.S. Census Bureau, Advance Monthly Retail Trade Survey, July 16, 2026		

Advance Estimates of U.S. Retail and Food Services

Advance estimates of U.S. retail and food services sales for June 2026, adjusted for seasonal variation and holiday and trading-day differences, but not for price changes, were \$768.6 billion, up 0.2 percent (± 0.4 percent)* from the previous month, and up 6.7 percent (± 0.5 percent) from June 2025. Total sales for the April 2026 through June 2026 period were up 6.4 percent (± 0.5 percent) from the same period a year ago. The April 2026 to May 2026 percent change was revised from up 0.9 percent (± 0.4 percent) to up 1.0 percent (± 0.2 percent).

GENERAL INFORMATION

Release Schedule

The July 2026 Advance Monthly Retail report is scheduled for release on August 14, 2026 at 8:30 a.m. EDT. View the full schedule in the Economic Briefing Room: <<https://www.census.gov/economic-indicators/>>. The full text and tables of this release can be found at <<https://www.census.gov/retail/index.html>>.

Intention to Revise

Monthly retail sales estimates are anticipated to be revised based on historical corrections and the results of the 2023 and 2024 Annual Integrated Economic Survey. Revised not adjusted estimates and corresponding adjusted estimates are tentatively scheduled for release on September 28, 2026 at 10:00 a.m. EDT.

EXPLANATORY NOTES

The advance estimates are based on a subsample of the Census Bureau's full retail and food services sample. A stratified random sampling method is used to select approximately 4,800 retail and food services firms whose sales are then weighted and benchmarked to represent the complete universe of over three million retail and food services firms. For more information on how data is collected for the Advance Monthly Retail Trade Survey (MARTS), see our methodology page at https://www.census.gov/retail/marts/how_surveys_are_collected.html.

Survey Description

The U.S. Census Bureau conducts the Advance Monthly Retail Trade and Food Services Survey to provide an early estimate of monthly sales by kind of business for retail and food service firms located in the United States. Each month, letters are mailed to a probability sample of approximately 4,800 employer firms selected from the larger Monthly Retail Trade Survey (MRTS). Advance sales estimates are computed using a link relative estimator. For each detailed industry, we compute a ratio of current-to-previous month weighted sales using data from units for which we have obtained usable responses for both the current and previous month. For each detailed industry, the advance total sales estimates for the current month is computed by multiplying this ratio by the preliminary sales estimate for the previous month (derived from the larger MRTS) at the appropriate industry level. Total estimates for broader industries are computed as the sum of the detailed industry estimates. The link relative estimate is used because imputation is not performed for most nonrespondents in MARTS. For a limited number of nonresponding companies that have influential effects on the estimates, sales may be estimated based on historical performance of that company. The monthly estimates are benchmarked to the annual survey estimates from the Annual Retail Trade Survey once available. The estimates are adjusted for seasonal variation and holiday and trading day differences. Additional information on MARTS and MRTS can be found on the Census Bureau website at www.census.gov/retail.

The Census Bureau has reviewed this data product to ensure appropriate access, use, and disclosure avoidance protection of the confidential source data (Project No. P-7504206, Disclosure Review Board (DRB) approval number: CBDRB-FY26-003).

Reliability of Estimates

Because the estimates presented in this report are based on a sample survey, they contain sampling error and nonsampling error.

Sampling error is the difference between the estimate and the result that would be obtained from a complete enumeration of the sampling frame conducted under the same survey conditions. This error occurs because only a subset of the entire sampling frame is measured in a sample survey. Standard errors and coefficients of variation (CV), as given in Table 3 of this report, are estimated measures of sampling variation.

The margin of sampling error, as used on page 1, gives a range about the estimate which is a 90 percent confidence interval. If, for example, the percent change estimate is +1.2 percent and its estimated standard error is 0.9 percent, then the margin of sampling error is $\pm 1.753 \times 0.9$ percent or ± 1.6 percent, and the 90 percent confidence interval is -0.4 percent to +2.8 percent. If the interval contains 0, then one does not have sufficient evidence to conclude at the 90 percent confidence level that the change is different from zero and therefore the change is not statistically significant. Estimated changes shown in the text are statistically significant unless otherwise noted. For a monthly total, the median estimated coefficient of variation is given. The resulting confidence interval is the estimated value $\pm 1.753 \times CV \times$ (the estimated monthly total). The Census Bureau recommends that individuals using estimates in this report incorporate this information into their analyses, as sampling error could affect the conclusions drawn from the estimates.

Nonsampling error encompasses all other factors that contribute to the total error of a sample survey estimate. This type of error can occur because of nonresponse, insufficient coverage of the universe of retail businesses, mistakes in the recording and coding of data, and other errors of collection, response, coverage, or processing. Although nonsampling error is not measured directly, the Census Bureau employs quality control procedures throughout the process to minimize this type of error.

Statement Regarding Natural Disasters

For information on the impact of natural disasters on the compilation of this report, please see the Frequently Asked Questions (FAQs) on our website at www.census.gov/retail/marts_weather_faqs.html.

(*) Advance estimates are not available for this kind of business.

(NA) Not available (a) Advance estimate (p) Preliminary estimate (r) Revised estimate

(S) Estimate does not meet publication standards because of high sampling variability (coefficient of variation is greater than 30%), poor response quality (total quantity response rate is less than 50%), or other concerns about the estimate's quality.

(1) Estimates include data only for businesses with paid employees. Prior to the benchmark report released in April 2025, the Advance Monthly Retail Trade Survey estimates included nonemployers.

For a full description of the NAICS codes used in this table, see <<https://www.census.gov/naics/>>.

(2) Estimates are concurrently adjusted for seasonal variation and for holiday and trading day differences, but not for price changes. Concurrent seasonal adjustment uses all available unadjusted estimates as input to the X-13ARIMA-SEATS program. The factors derived from the program are used in calculating all seasonally adjusted estimates shown in this table. Year-to-date seasonally adjusted sales estimates are not tabulated. Adjustment factors and explanatory material can be found on the Internet at <<http://www.census.gov/retail>>.

(3) Advance estimates are based on early reports obtained from a small sample of firms selected from the larger Monthly Retail Trade Survey (MRTS) sample. All other estimates are from the MRTS sample.

(4) GAFO represents firms which specialize in department store types of merchandise and is comprised of furniture & home furnishings (442), electronics & appliances (443), clothing & accessories (448), sporting goods, hobby, musical instrument, and book (451), general merchandise (452), office supply, stationery, and gift stores (4532).

Source: U.S. Census Bureau, Advance Monthly Retail Trade Survey, July 16, 2026. (Project No. P-7504206 / Approval CBDRB-FY26-003), Table 3 provides estimated measures of sampling variability. Additional information on confidentiality protection, sampling error, nonsampling error, sample design, and definitions may be found at <www.census.gov/retail/how_surveys_are_collected.html>.

(1) Estimated measures of sampling variability are based on estimates not adjusted for seasonal variation or holiday or trading day variation. Medians are based on estimates for the most recent 12 months.

(2) These columns provide measures of the difference between the advance-to-preliminary and preliminary-to-final estimates of month-to-month change for the same pair of months as measured by the Advance sample and MRTS sample. The average and median revisions are based on estimates for the most recent 12 months.
